

Linovera®

Rethink skin health

Hyperoxygenated fatty acids
(HOFA) & vegetable extracts

B | BRAUN
SHARING EXPERTISE

Rethink skin health

Chronic wounds are a major medical concern world-wide. They significantly impact patients' quality of life, while also affecting close family and relatives.^{1,2,3}

In addition, chronic wounds place a considerable financial burden on healthcare systems and society.⁴

Topical preventive agents such as Linovera® can help to preserve patients' skin health and contribute to overall cost reductions. They can be used to enhance skin integrity as they maintain skin moisture levels and prevent dehydration.

Linovera® ingredients

The hydroxygenated fatty acids (HOFA) in Linovera® are derived from sunflower oil, which is naturally rich in linoleic acid – an essential fatty acid that is important for maintaining epidermal integrity and the skin's natural water barrier.^{5,6}

Mode of action

Linovera® can be useful in the prevention of skin breakdown or in the management of already impaired skin.^{10,12}

*TEWL: Transepidermal Water Loss

How to use Linovera®

- 1 Clean the skin at risk or the periwound skin.
- 2 Apply the product and spread it gently over the skin, rather than rubbing it in.
- 3 The product should be applied 2 or 3 times a day.

Protective dressings

If necessary, protect risk areas with dressings suitable for each location.

Easy to use and apply on large surfaces
