

Askina® Barrier Cream

Protectant and Moisture Barrier

Askina® Barrier Cream

Protectant and Moisture Barrier

Askina® Barrier Cream acts as a lasting protective barrier on the skin of people living with incontinence. When applied, it is quickly absorbed, providing an invisible, breathable, moisturising and water repellent layer, resistant to washing off. It efficiently moisturises very dry skin. It can also be used for skin protection whenever there is a risk of skin breakdown due to prolonged contact with body fluids.

- Effective prevention of skin breakdown associated with incontinence
- Highly concentrated: Small amounts will cover a large surface
- Does not reduce the absorbency of continence aids
- Does not reduce the adherence of fixation tapes and dressings
- Temporarily resists wash-off; no need for frequent application

Askina® Barrier Cream has a large area of application.

Examples:

- To protect the skin from incontinence related issues
- To moisturise and protect dry and fragile periwound skin from adhesive damage and moisture exposure
- Provides protection from all moisture related issues

INDICATIONS:

Askina® Barrier Cream is indicated for use on intact skin. Askina® Barrier Cream acts as a protectant and moisture barrier:

- Against maceration caused by incontinence or body fluids
- To protect sensitive, fragile and severely dry skin, including periwound areas
- To prevent skin irritation

TIP: Dry the skin thoroughly before application

- Spread Askina® Barrier Cream thinly to cover the affected area
- Re-application time will be dependant on the frequency of cleaning and with secondary dressing change
- On frequently cleaned skin, daily reapplication may be required
- Can be used underneath Askina® Barrier Film for when moisture plus additional protection is required
